$\qquad$

1) The probability space shown below shows all the possible outcomes on a given day when Sheedy plays Quentin at Madden Football and when ARod plays Quentin at Madden Football. The probabilities we know are
$P(A)=$ Probability that $A R o d$ will beat Quentin $=0.78$
$P(S)=$ Probability that Sheedy will beat Quentin $=0.84$
Fill out the Venn Diagram below labeling every possible outcome including its probability.

2) The probability space shown below shows all the possible outcomes on a given day when Jake, Parker and/or Josh are playing games on their iPads. The probabilities we know are
$P(L)=$ Probability that Parker is playing a game on his $\mathrm{iPad}=0.48$
$\mathrm{P}(\mathrm{S})=$ Probability that Jake is playing a game on his iPad $=0.84$
$\mathrm{P}(\mathrm{F})=$ Probability that Josh is playing a game on his $\mathrm{iPad}=0.97$
Fill out the Venn Diagram below labeling every possible outcome including its probability.

Given the table below (blood types and Rh factors) answer the following questions

Blood Type

| Rh Factor |  |  |  |
| :---: | :---: | :---: | :---: |
|  | + | - | Totals |
| O | 3885 | 840 | $\mathbf{4 7 2 5}$ |
| A | 3465 | 735 | $\mathbf{4 2 0 0}$ |
| B | 945 | 210 | $\mathbf{1 1 5 5}$ |
| AB | 315 | 105 | $\mathbf{4 2 0}$ |
| Totals | $\mathbf{8 6 1 0}$ | $\mathbf{1 8 9 0}$ | $\mathbf{1 0 5 0 0}$ |

3) Selecting one person at random from this group, find the probability of getting someone
a) With Blood Type A
b) With Rh Factor -
c) With Blood Type AB or Rh Factor +
d) With Blood Type O or Rh Factor -
4) Selecting someone at random from only those with Rh Factor + find the probability of selecting someone with Blood Type AB
